ERGOseal

Vessel sealing without limits

ERGOseal
Vessel sealing by BOWA MEDICAL

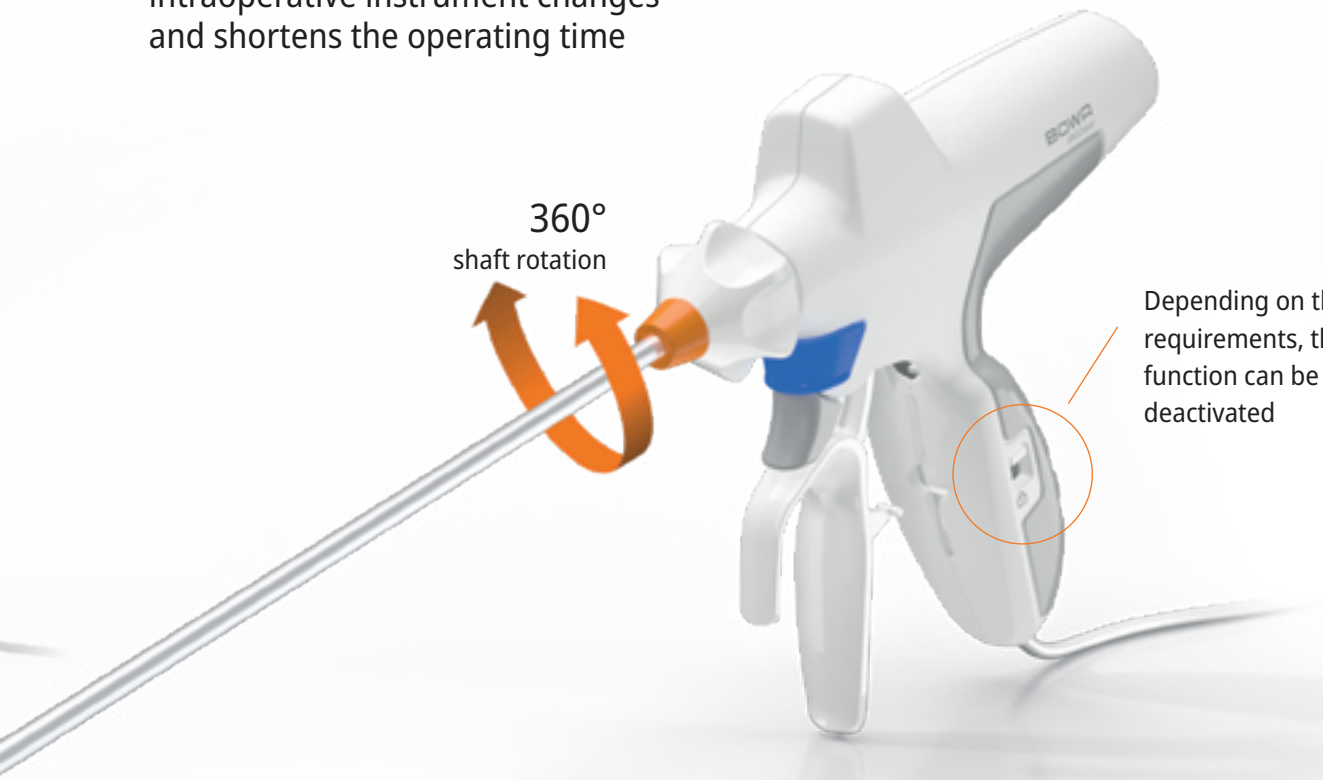
EXCEEDING YOUR EXPECTATIONS –
Vessel sealing with maximum freedom

The ERGOseal vessel sealing instrument combines functional components that reduce the need for intraoperative instrument changes, especially in laparoscopy. Dissecting, sealing and separating tissue is possible in a reliable and reproducible manner. In addition, the jaws are designed in such a way that tissue layers can be accessed easily and with more control. The 360° shaft rotation enables rapid positioning of the jaws to the target tissue.

ARCseal

The ARCseal mode of the ARC 400 generator and the ERGOseal form a seamlessly integrated sealing system.

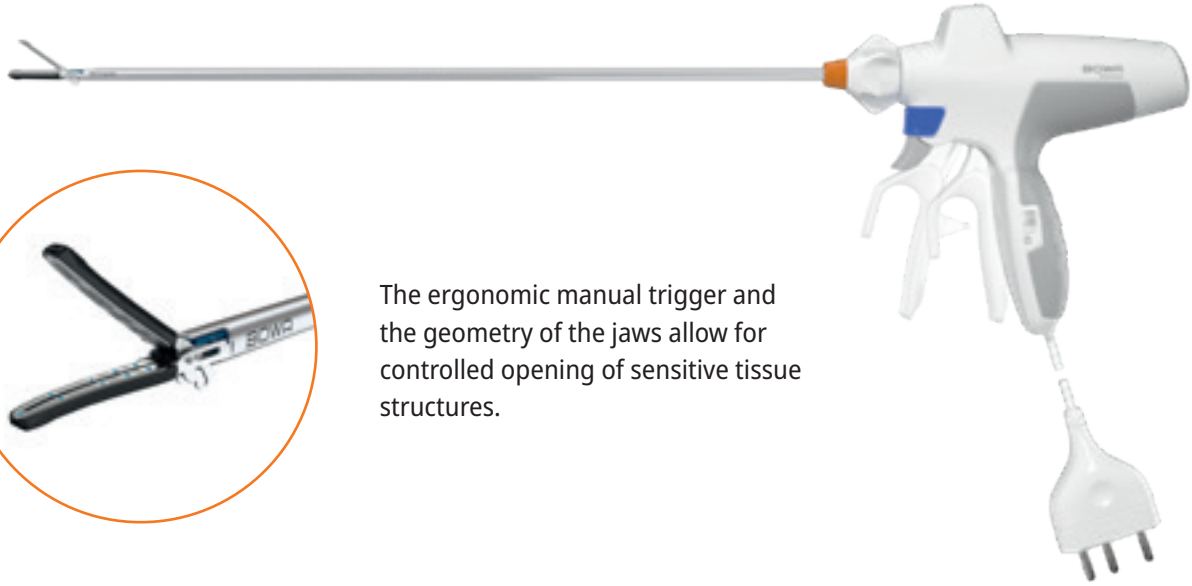
- Precise tissue dissection
- Reproducible sealing and cutting of vessels up to 7 mm
- ERGOseal reduces the need for intraoperative instrument changes and shortens the operating time



Depending on the user's requirements, the locking function can be activated or deactivated

The ERGOseal design and operating concept offers a high degree of comfort and surgical freedom

The distal jaw shape is specially designed for blunt dissection or insertion into tissue layers.



The ergonomic manual trigger and the geometry of the jaws allow for controlled opening of sensitive tissue structures.

Plug&Play –
COMFORT instrument recognition

AREAS OF APPLICATION

- General surgery
- Thoracic surgery
- Gynaecology
- Bariatric surgery
- Urology
- ENT
